Clinical/rehabilitation: In this type of case management, the individual works with a case manager who provides integrated clinical treatments in addition to managing resources; these treatments can include therapy, counseling, skills development, intervention, and more. This is another long-term type of case management since the relationship between therapist/case manager and client is integral to the healing process.

### **How a Case Manager Helps with the Treatment Process**

Some stroke survivors recover quickly. But most need some form of long-term stroke rehabilitation, lasting possibly months or years after their stroke. Your stroke rehabilitation plan will change during your recovery as you relearn skills and your needs change. With ongoing practice, you can continue to make gains over time.
